## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election of Group I – Claims 6, 7, 13, and 14 in the reply filed on April 11, 2004, is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of

Art Unit: 3749

the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 6, 13, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kenner (5,090,896) in view of Kawamura (4,703,888). Kenner discloses an evaporative burner having substantially all of the claimed limitations, including, among other things, a combustion chamber 9, evaporative medium 4, a first heating device 8, and a second heating device 6. Kenner does not specifically recite a control device or cleaning device. Kawamura teaches a fuel burner including both the control device 15 for enhanced control of the burner and a cleaning device (see at least col. 5, lines 10-25) for burning out and removing carbon deposits to enhance operation efficiency. Accordingly, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the controller and cleaner of Kawamura into the invention disclosed by Kenner, so as to provide for enhanced control and operation efficiency.

6. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kenner (5,090,896) in view of Kawamura (4,703,888) and further in view of Gaysert. The combination of Kenner and Kawamura, as discussed above, teaches substantially all of the claimed limitations, but does not specifically recite an electric resistance heater. Gaysert teaches an electric resistance heater for fuel. Gaysert further teaches that

Art Unit: 3749

such arrangements provide the advantage of enhanced reliability. Accordingly, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the heater of Gaysert into the invention disclosed by the combination of Kenner and Kawamura, so as to provide for enhanced reliability.
